(54) AFTERTREATMENT SYSTEM FOR PAPER SHEET

(57)Abstract:

PURPOSE: To simplify connecting mechanism and control software in the case of performing the multistage connection of aftertreatment devices for paper sheets.

CONSTITUTION: A centered state by a foremost-stage image forming device 1 so as to draw these sheets into a specified width position, a master post treatment device 800a, a sub-post treatment device 800b, and a sub-subpost treatment device 800 are connected in this order to this foremost-stage image forming device 1. The post treatment devices 800a-800c are respectively provided with connecting units 802a-802c for discharging the sheets from the pre-stage device to the post-stage post treatment devices. The connecting units 802a-802c are respectively controlled by the post treatment devices 800a-800c, and driving force is transmitted to the skewing part 100 and connecting units 802a, 802b from the poststage post treatment devices 800a-800c.
